EBITDA Projections

The Mathematical Impact of Section 125 on Your Balance Sheet

WIMPER
CONFIDENTIAL BRIEFING

1. The Core FICA Recapture Mechanism

The WIMPER Program structurally reroutes unavoidable capital leakage by leveraging Section 125 of the Internal Revenue Code. Under these federal tax laws, self-funded preventative healthcare policies allow companies to reclassify specific payroll contributions automatically. The immediate outcome is a substantial reduction in your gross taxable payroll.

Projected Capital Retention Metrics

Metric Category	Standard Payroll Architecture	WIMPER Optimized Architecture
FICA Tax Obligations	100% Taxable Baseline	**Avg. $700+ Recapture per Employee (Annually)**
Employee Pre-Tax Deductions	Standard Copays & Premiums	**Section 125 Pre-Tax Allocation via Revive Health**
Impact on Bottom-Line EBITDA	Baseline Net Margin	**Immediate FICA Savings Injected to EBITDA**

2. The Employee Retention Multiplier

Because this mechanism is completely neutral to the employer's net operating expense, the captured FICA savings completely fund elite-tier health infrastructures. Your employees receive comprehensive gap coverage through Manhattan Life and elite telemedicine through Revive Health. You lower business taxes, whilst simultaneously injecting thousands of dollars of value into your staff's benefits packages, vastly increasing retention without depleting your capital reserves.

Disclaimer: The projections above are mathematical averages based on minimum viable thresholds. The WIMPER Program is not a CPA firm. Final EBITDA injections scale dynamically relative to your exact payroll volume and W-2 headcount.
